

DESCRIPTION

Manron Soil is a soil-applied liquid nutrient product that is designed to provide Manganese (Mn) and Sulfur (S) that may be deficient in the soil or plant.

DIRECTIONS FOR USE

Tank mix compatibility is impacted by water quality which may vary by location. DO NOT tank mix with Calcium fertilizers unless agitation is available. When mixing **Manron Soil** with other materials, always establish compatibility using the standard quart jar method prior to tank mixing. DO NOT mix **Manron Soil** with other products containing phosphate in concentrated form without first adding water to adjust the pH to 5.0. Best results will be obtained when applications are watered in. Inject with a drip or sprinkler irrigation system. May be sprayed under the drip line of the plants or knifed in prior to a sprinkler irrigation or surface irrigation. Apply enough water to move the product into the area of active rooting, but not excessive amounts that may leach the product below the root system. Use the higher label rates with surface and flood irrigation.

RATES & TIMING		
Orchards & Vineyards	1-8 QUARTS PER ACRE	Apply in the early spring and repeat at 2-8 quarts/acre in the fall after harvest.
Field, Row, Vegetable & Fruit Crops	1-4 QUARTS PER ACRE	Apply any time during growing season; repeat as needed.

DESCRIPTION

Manron Foliar is a foliar-applied liquid nutrient product that is designed to provide Manganese (Mn) and Sulfur (S) that may be deficient in the soil or plant.

DIRECTIONS FOR USE

Tank mix compatibility is impacted by water quality which may vary by location. When mixing with phosphate fertilizers adjusting the pH of the final tank mix to 5.0 with citric acid will improve compatibility and improve uptake. When mixing **Manron Foliar** with other materials, always establish compatibility using the standard quart jar method prior to tank mixing. Adjusting the pH of the final spray tank to 5.0 with citric acid may improve compatibility and enhance uptake. **Manron Foliar** should be applied as a foliar spray. Spray in the late evening or early morning. DO NOT spray in the heat of the day. DO NOT spray when the plant is under moisture stress. Use as fine of a spray mist as possible. DO NOT spray to the point of runoff. Allow 3-4 hours after application before sprinkler irrigating to avoid washing the product off.

RATES & TIMING

Orchards & Vineyards	1-4 PINTS PER ACRE	Apply any time during the growing season; in extreme deficiencies, 4-6 pints/acre may be applied; DO NOT apply these higher rates with crop oil concentrates. Always use the higher rate with water volume greater than 50 gallons per acre.
Field, Row, Vegetable & Fruit Crops		Apply any time during growing season; repeat as needed.
